EDUCATION

McGill University

Montreal, Quebec, Canada

Bachelor of Science, Computer Science, 3.7 GPA

2022 – 2025 (Graduated)

- Study abroad: University of Edinburgh (Winter 2024), King's College London (Autumn 2024)
- Coursework: Statistical Learning, Statistical Computing, Brain-Inspired Artificial Intelligence, Time Series Analysis, Database Systems, Mathematical Finance, Machine Learning for Biomedical Applications, Entrepreneurship and Innovation

WORK EXPERIENCE

Full-Stack Developer

Nov 2025 – Present

Vretta

Montreal, Canada (Remote)

- Led end-to-end improvements across backend services using **Node.js** and **TypeScript**, debugging production issues with direct **SQL** inspection and **Redis** tracing, reducing incident resolution time by **30%**.
- Improved platform reliability by restructuring **Angular** data flow logic, redesigning backend data contracts in **Firebase**, and validating end-to-end system behavior with **AWS Observer** on **AWS**, reducing data-related errors by **25%**.

Software Engineering Intern

May 2025 – August 2025

Alphinat

Montreal, Canada

- Owned the end-to-end delivery of a production web application for the **HCCH**, improving workflow completion rates by **35%** through redesigned user flows, complete frontend implementation, and deployment in a **.NET + IIS** environment.
- Automated the multilingual content pipeline and cut translation turnaround time by **90%** (from 1 month to **3 days**) by developing a **Python + pandas** tool that eliminated thousands of manual text operations.

Full-stack Engineer

September 2024 – December 2024

Avocado

Montreal, Canada (Remote)

- Architected and delivered **90%** of the platform's core marketplace by building end-to-end product listings, image uploads, and date-based rental availability using **Next.js**, **Prisma**, **MongoDB**, and **Google Cloud**.
- Increased platform trust and automated transactions by integrating **Stripe Identity** and **Stripe Payments**, reducing fraudulent signups by **60%** and cutting manual payment handling by **80%**.

Software Engineer (Contract)

May 2023 – December 2023

Allons Burger

Montreal, Canada

- Led end-to-end development of a **Dart + Spring Boot** ordering app, integrating **Stripe** and Doordash APIs to cut costs by **60–75%** and designed a rewards system with an optimized UI and admin dashboard to increase retention by **35%**.

LEADERSHIP EXPERIENCE

Founding Engineer

January 2025 – April 2025

Planorama

Montreal, Canada (Remote)

- Built a full-stack planning platform for **100+ users** using **Next.js**, **MongoDB**, and **NextAuth**, integrating **Stripe** and automation via **OpenAI**, **Discord**, and **GitHub** leveraging AI to cut design overhead by **80%**.
- Developed CI/CD pipelines with **GitHub Actions** to automate deployments and code publishing on every push, reducing release overhead by **40%** and ensuring rapid, reliable platform updates.

Lead Developer

May 2022 - August 2022

PairIt

Montreal, Canada (Remote)

- Owned end-to-end development of an iOS language-learning game in **SwiftUI**, designing the UI, coordinating audio production, and boosting learning efficiency by **70%** through a spaced-repetition recommendation engine.
- Scraped multilingual data from **Wikipedia** and generated frequency lists in **Rust**, accelerating data processing by **100×** through parallelization to deliver high-accuracy word-pair recommendations with **95%** relevance in testing.

HACKATHONS

McHacks 12 | Next.js, OpenAI API, ShadCN, MongoDB, React Flow, Discord API, GitHub API

Winter 2025

- Placed **2nd overall** out of **600+ developers**, presenting to judges including academic researchers and a YC-backed CTO.
- Built a graph-based project-management tool using **Next.js**, **React Flow**, **MongoDB**, and the **OpenAI**, **Discord**, and **GitHub** APIs, automating **80%** of planning tasks and improving team workflow clarity by **90%**.

McGill Robohacks 2023 | Arduino, C++, Thermal Sensors, Motor Control, Embedded Systems

Spring 2023

- Owned all software for a fire-extinguishing robot, programming **Arduino/C++** for thermal detection with **95%** accuracy and coordinating with mechanical/electrical teams.
- Integrated real-time sensor feedback with motor control systems, improving targeting responsiveness by **70%**.

PROJECTS

SQL Interpreter & Query Optimizer | Java, Data Structures, Query Optimization

Winter 2024

- Built an SQL interpreter and optimizer in **Java**, parsing SQL into an **AST** and applying **tree traversals**, **hash maps**, and **cost-based heuristics** to generate execution plans, improving performance by **40–50%**.
